Viktor Michel-Ange Santiago Fotso

Lancaster, LA1 1NS | +44 7570 697101 | santiagofotso@gmail.com | santiagovmf.github.io

PROFILE

MSc Cyber Security student at Lancaster University with three internships in penetration testing, incident investigation and embedded security. Experienced in web and infrastructure testing, writing pentest reports and bug bounty research. Looking to start a career in cyber security consulting.

EDUCATION

Lancaster University, UK Sep 2026 – Sep 2027
MSc Cyber Security (NCSC and BCS accredited) Expected

EFREI, Bordeaux, France 2025 – 2026
Bachelor's Degree in Cybersecurity and Ethical Hacking

UCAC-ICAM Institute, Douala, Cameroon 2023 – 2025
Computer Engineering (two years)

EXPERIENCE

KION Consulting, Johannesburg Feb 2026 – May 2026
Cybersecurity Analyst (Penetration Testing Intern)

- Carried out a full penetration test of the company's AI assistant web platform: found 5 vulnerabilities (CVSS 6.5 to 9.1), wrote the report and presented the remediation plan
- Reviewed logs and investigated security incidents on Windows and Linux systems

National Agency for ICT (ANTIC), Cameroon May 2025 – Jul 2025
Penetration Tester Intern

- Wrote Python scripts to automate vulnerability scanning and analysis
- Analysed malware behaviour and built phishing simulations in an isolated test environment

Tagus Drone May 2022 – Jun 2022
Embedded Systems Technician Intern

- Built an RFID-based access control system

PROJECTS AND SECURITY RESEARCH

Cyber Security Project Portfolio (santiagovmf.github.io) Ongoing

- 70 hands-on projects from beginner to advanced level, including honeypots, Snort IDS, digital forensics, PKI, malware sandboxing, threat intelligence and Red Team / Blue Team exercises

Bug Bounty Hunting (YesWeHack, HackerOne) 2025 – Present

- Reported vulnerabilities rated up to CVSS 8.2, including a hardcoded encryption key and exposed API keys

AI SOC Platform Personal project

- SOC simulation platform with multiple AI agents, built with FastAPI, React, PostgreSQL, FAISS and Docker Compose

PhishGuard Personal project

- Python desktop tool that detects phishing emails using the OpenAI API

SKILLS AND CERTIFICATIONS

Security: penetration testing, vulnerability assessment, CVSS, incident investigation, risk analysis, Active Directory

Tools: Burp Suite, Nmap, Metasploit, Nuclei, mitmproxy, Kali Linux

Programming: Python, Bash, PowerShell, C, C++, Java, JavaScript, SQL

Networking: TCP/IP, VLANs, ACLs, routing and switching, Linux and Windows administration, Docker

Certifications: Cisco CCNAv7, Cisco Ethical Hacker, Cisco Network Defense (Cisco Networking Academy); Developing Secure Software, LFD121 (Linux Foundation / OpenSSF); Zero Trust Security Essentials (Cato Networks); AI Fluency: Framework and Foundations (Anthropic); Google AI Essentials (Google); Digital Marketing Certified (HubSpot)

Languages: French (native), English (C1)

Interests: CTF competitions, LUHack (Lancaster University hacking society), competitive golf and swimming
